

ADVANCED BEAUTY

Three steps, one session

HydraFacial uses patented technology to cleanse, extract, and hydrate while rebuilding collagen levels to boost skin in one 30-minute session. HydraFacial works in three stages; Cleanse and Peel, Extract and Hydrate, and Fuse and Protect. Read the full details at hydratfacial.co.uk

Good vibrations

Based on the principle of Compressive Microvibration the FDA registered endoSpheres is entirely non-invasive and works in a 'biological' manner. The handpiece contains a cylinder that rotates on its own axis and contains 55 antiallergic spheres, positioned in a honeycomb-like pattern, that works on the body's natural mechanisms to break down, remove, and re-shape fat and adipose tissue, whilst at the same time stimulating elastin and collagen production for a fully toned, sculpted, and lifted effect. See more at endospheres.co.uk

Chill out

Lumenis' LightSheer Desire has two cutting edge technologies that work in tandem; vacuum assisted high-speed integrated technology and ChillTip™ technology, utilised within three handpieces. The ChillTip™ offers epidermal protection during laser procedures and also increases efficacy and patient comfort as it takes heat away from the area being treated. Visit lumenis.com for further details

Focus on precision

A highly effective, efficient and completely pain free machine, the DFA Fibre is an innovative technology in the field of high-end hair removal treatments that focuses on precision, maximising use of energy. DFA Fibre is a fibre coupled 810nm multiple diode located inside the body of the machine (as opposed to in the handpiece) to offer benefits that have never been seen before.
